

MANAGED DATABASE SECURITY FROM JSONAR

WE BUILT AND MANAGE IT. YOU GET DATABASE SECURITY AT A FRACTION OF THE EFFORT AND COST.

JSONAR MAKES DATABASE SECURITY AFFORDABLE AND AVAILABLE TO ALL ENTERPRISES

You don't need specialized skills or a dedicated internal team to have a rock-solid database security and compliance program. Historically, smaller companies have not had the resources to effectively protect their data systems. Today, jSonar enables any size business to gain actionable security insight into the activity happening within any data system in any location. With out-of-the-box security for 60+ data systems both on-premise and in the cloud, you just send us your information and we'll do the rest.

A UNIFIED VIEW OF ON-PREMISE AND CLOUD-BASED DATA SOURCES

jSonar fully manages and supports all database types and platforms. We provide you all the analytics, reports, and dashboards as well as threat detection alerting required to deploy a comprehensive database security and compliance program across your entire estate of data systems. No matter how many on-premise and/or cloud-based data sources you have, jSonar enables you to monitor what users and applications are doing with your data from a single platform.

UNLOCK REAL DATA SECURITY VALUE

jSonar helps overcome the high cost of on-premise database activity monitoring and the inadequate built-in security capabilities offered in DBaaS from public cloud providers. Some DBaaS' monitor database activity but do not issue alerts. Very few integrate with platforms that automatically raise tickets or trigger a workflow to mitigate a security threat. We do all of that. jSonar does the work of a small database security army so you can get Fortune 500 company-level access to the features, tools, and reports that create real database security – at a tiny fraction of the cost and effort.

Are you ready for end-to-end database security? We can help!
